

Initial account sets:

welcome	{}
retail	{CC, Prepaid*, Income}
company	{CC, DOMU}
full	{CC, DOMU, Prepaid*, Income}
employee	{CC}
on_hold	{}
consumer	{CC, Bisoo*}
consumer_verified	{CC, Bisoo*}
MNGR	{CC, Topup*, MIRROR}

Each group (user type) is initially assigned a set of accounts it can own and use, and each set can only grow (for legal reason it cannot shrink). Each user can only have **ONE** account of a given type.

The interactability shown in the above tables then **IMPLIES** the transactability between the groups shown in the Group Transactability Function (GTF) page.

Whereas the Account Permissioning Function (APF) and these sets of accounts are defined and assigned statically, off-line, the GTF is evaluated dynamically during the execution of the PreviewRequest ASIM.

These account assignments already satisfy the GTF as far as the CC transactions are concerned. However, the Fees, the Euro transactions, the B2C Operations, and the channels have not been formalized or verified yet.

* Indicates an account under control of SysAdmin, not of user it belongs to.
